ABB industrial drives

ABB industrial drives are designed for industrial applications, and especially for applications in process industries such as the converting, pulp & paper, metals, mining, cement, power, chemical, and oil & gas industries. ABB industrial drives are highly flexible AC drives that can be configured to meet the precise needs of industrial applications, and therefore order-based configuration is an integral part of the offering. These drives cover a wide range of powers and voltages, including industrial voltages up to 690 V. ABB industrial drives come with a wide range of built in options. A key feature of these drives is programmability, which makes adaptation to different applications easy.

Industrial design

ABB industrial drives are designed with current ratings to be used in industrial environments for applications requiring high overloadability. The heart of the drive is DTC, Direct Torque Control, that provides high performance and significant benefits: e.g. accurate static and dynamic speed and torque control, high starting torque and use of long motor cables. Built in drive options make the installation work fast and easy. The robust enclosures and cabinets, with a wide range of enclosure classes, as well as power terminals, are designed for harsh environments.

One of the most significant design criteria of ABB industrial drives has been long lifetime. Wearing parts such as fans and capacitors have been selected accordingly. This means - together with extensive protection features - excellent reliability in demanding industrial applications.

DTC Motor Control

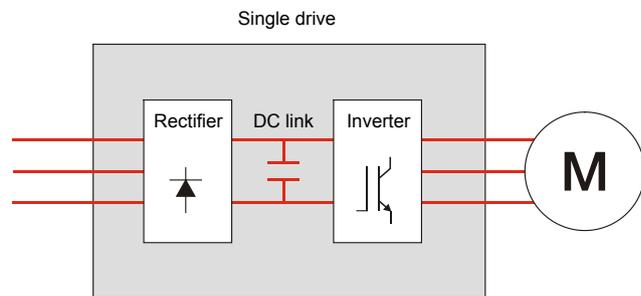

Direct Torque Control (DTC) developed by ABB has improved motor control accuracy without the requirement of speed feedback device. Accurate speed and torque control of the manufacturing process optimizes the quality of the end product. Many applications no longer require additional speed feedback when the ACS800 with DTC is used.

Industrial^{IT} enabled

ABB industrial drives are Industrial^{IT} enabled. This guarantees the user that ABB industrial drives can be easily integrated into ABB Industrial IT systems.

Single drives

The single drive configuration contains a rectifier, DC link and an inverter in one single AC drive unit.

The single drives are complete AC drives that can be installed without any additional cabinet or enclosure. The single drives are available as wall-mounted, free-standing and cabinet-built constructions. The standard protection class of the single drives is UL Type 1 and higher protection classes are available as an option.

Type Code

This is the unique reference number that clearly identifies your drive by construction, power rating voltage and selected options. By type code you can specify your drives from the wide range of available options, customer specific ones are added to the type code using the corresponding + code.

Direct Torque Control Technology

DTC Technology - key in the ACS800 family

Direct Torque Control is an optimized motor control method for AC drives that allows direct control of all the core motor variables. This opens up AC drive capabilities never before realized and offers benefits for all applications.

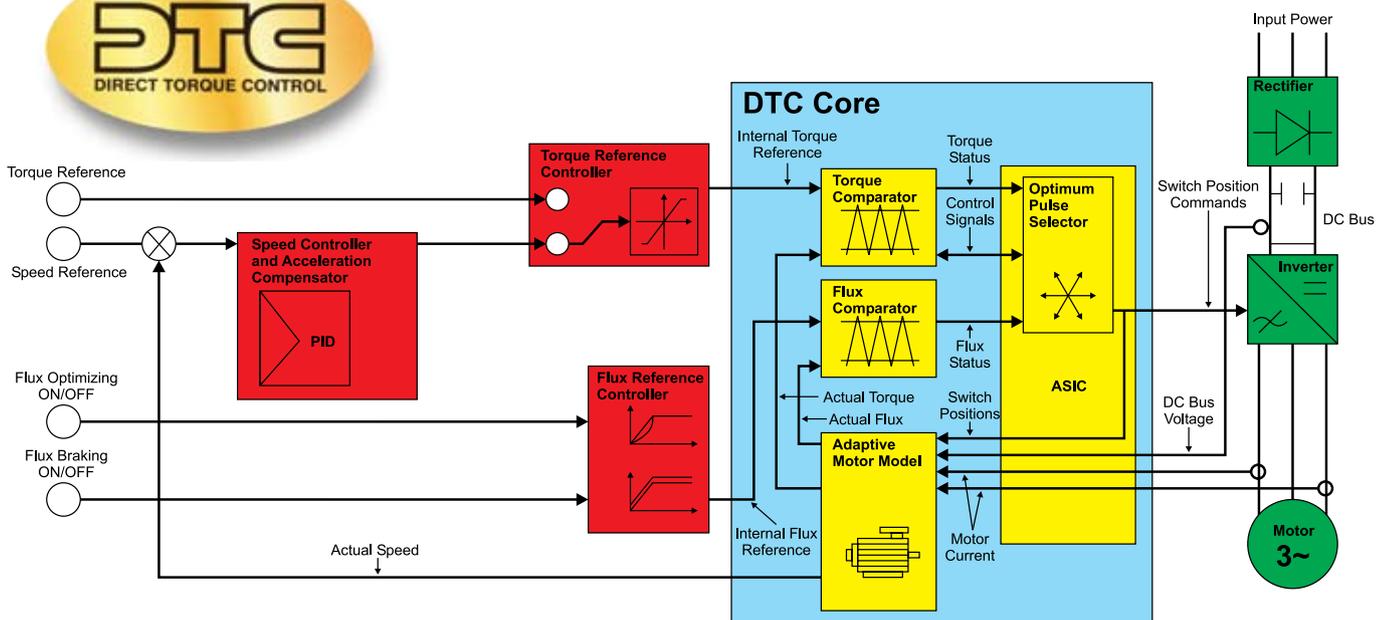

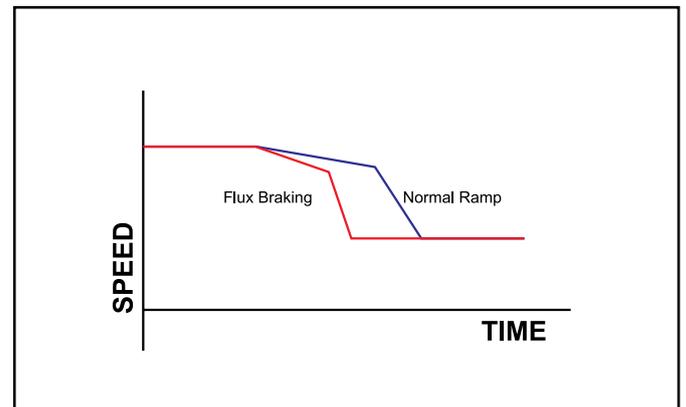

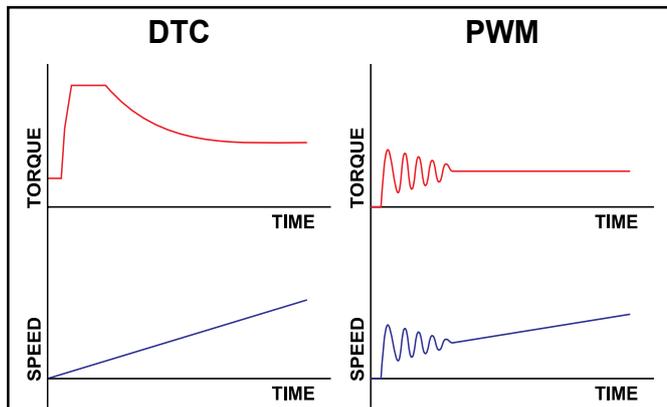

What is Direct Torque Control?

Direct Torque Control, DTC, is a revolutionary motor control method for AC drives which allows accurate control of both motor speed and torque without pulse encoder feedback from the motor shaft, down to zero speed. In DTC, stator flux and torque are used as primary control variables. The motor state calculations are updated by the high speed digital signal processor at 40,000 times a second in the advanced motor software model. Due to the continuous updating of the motor state and the comparison of the actual values to the reference values, every

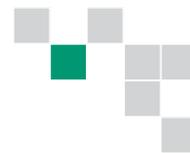

single switching in the drive is determined separately. This feature will always produce the optimal switching combination and can instantly react to dynamic changes such as load shocks or power interruptions. In DTC, there is no need for a separate voltage and frequency controlled pulse width modulator.

Unequalled motor speed & torque control

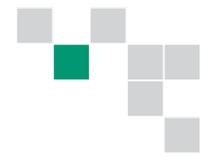

Open loop dynamic speed control accuracy matches that of AC drives using closed loop flux vector control. The ACS800 delivers static speed control accuracy of 0.1% to 0.5% of nominal speed - more than adequate for most industrial applications. In applications requiring even more precise speed regulation, an optional pulse encoder can be used. With an open loop torque step rise time of less than 5 milliseconds - compared to over 100 ms in AC drives using sensorless flux vector control - the ACS800 AC drive is unbeatable.

Module drive main features

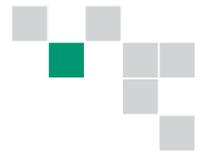

Features	Benefits	Notes
Compact and complete		
Compact size, everything integrated	Less space and installation work required.	No need to install extra components such as input chokes or EMC filter.
Flange Mounting	Power section heat is outside the enclosure, thus requiring less enclosure cooling.	Option kit for frames R2-R6. Not available for other frames
Built in harmonic filter in all ACS800 drives	Low harmonics, meaning less interference and less heating in cables and transformers. Filter also protects the drive from line side transients.	
Wide range of options available	Standard solutions available from ABB to meet most customers application needs.	
Versatile braking options	Optimal braking options are always available. No need for an external braking chopper thus reducing size and installation cost.	Input contactor is not required for use with the brake chopper.
User interface		
User friendly customer interface	Easy and fast commissioning and operation.	Optional control panel has clear, alphanumeric display with start-up assistant that guides through the start-up procedure. Easy to use PC tools available for commissioning, maintenance, monitoring and programming.
Versatile connections and communications	Standard I/O covers most requirements. Connectable to commonly used fieldbuses.	Extensive standard and optional I/O.
Extensive programmability	Flexibility. Possible to replace relays or even a PLC in some applications.	Two levels of programmability: 1. Parameter programming (standard) 2. Adaptive programming (free block programming) - standard feature - more blocks available as options - all I/Os are programmable
Industrial design		
Wide power and voltage range	One product series can be used to meet all application needs, meaning less training and spare parts and standardized interface to drives.	0.75 to 600 Hp 208 to 690 Vac
Robust main circuit design	Suitable for heavy industrial use. Reliable. Long motor cables can be used without extra output filters.	Components dimensioned for heavy duty and long lifetime. Advanced thermal model allows high overloadability.

Module drive main features

Features	Benefits	Notes
Industrial design		
Extensive protection features	Enhanced reliability, fewer process interruptions. Possibility to also protect motors and process.	Several adjustable limits to protect other equipment included.
Galvanic isolation of I/O	Safe and reliable operation without separate isolators and relays.	Isolated input signals and relay outputs as standard.
All terminals designed for industrial use	Sufficient size even for large aluminum cables. No need for special tools in I/O cabling.	
Worldwide approvals: CE, UL, cUL, CSA, C-Tick and GOST R	Products that can be used everywhere in the world.	C-Tick and Gost R are available on select product or as special type code.
Right performance for every application		
DTC, accurate dynamic and static speed and torque control	Excellent process control even without speed feedback device - improved product quality, productivity, reliability and lower investment cost	
DTC - allows high overloadability and gives high starting torque	Reliable, smooth start without overdimensioning the drive.	
DTC, fast control	No unnecessary trips or process interruptions.	Fast reaction to load or voltage variations prevents tripping. Rides through power interruptions by using kinetic energy of the load.
DTC, flux optimization and sophisticated motor model	Excellent motor and drive efficiency - cost savings for non-dynamic applications like pumps or fans.	Optimal flux in the motor reduces losses on applications where Dynamic Response requirements are minimal.
DTC, mechanics friendly	Less stress for mechanics improves reliability.	No shock torques. No torque ripple - minimized risk for torsional vibration. Active oscillation damping.
Available with both positioning control & normal speed/torque control in the same hardware	Same hardware & user interface for different applications means less training and fewer spare parts as well as easier system design and documentation.	
Made by ABB		
Global market leader in AC drives. Long experience.	Well proven, safe and reliable solutions. Application know-how.	
World wide service and support network	Professional support available around the world.

Machinery Directive 98/37/EC
EMC Directive 89/336/EEC with amendment 93/68/EEC 33

EMC (according to EN 61800-3)

2nd environment, unrestricted distribution category C3 as option up to R8
1st environment, restricted distribution category C2 as option up to 1000 A input current

NOTE: Available options are shown in the Summary of features options table. Please see pages 48-49.

Single drive modules

ACS800-U4

ACS800-U4 single drive modules

ACS800-U4 drives are single drive modules that are optimized for building into customers' own cabinets. They have been designed to minimise the cabinet space used, make cabinet assembly as easy as possible, and give maximum flexibility. The power range is from 0.75 to 600 Hp. All the drives, regardless of the power and voltage, have the same customer interface and I/O making system design and training easier.

The units have everything necessary built-in. That includes, for example, built-in chokes for harmonic filtering as standard, built-in braking chopper and built-in EMC filtering (both are optional in some frame sizes), making cabinet assembly easier. There is also a wide selection of different I/O and communications options. There is also a variety of external accessories available.

There is also a wide selection of different I/O and communications options. In addition to them there is available a selection of external accessories.

To optimize the use of the cabinet space, most of the ACS800-U4 modules can be mounted side by side. The modules themselves are not only designed for cabinet assembly, but covering documentation is also available. This documentation provides examples of different cabinet installations, circuit drawings, and hints on the selection of auxiliary equipment.

Optimized for cabinet assembly - frame sizes R2 - R6

The R2 - R6 frame size units are designed for cabinet panel mounting. The power range starts from 0.75 Hp and extends up to 200 Hp. The voltage range is from 230 V up to 690 V. The enclosure class of the modules is IP 20 as standard.

Flange mounting is available as an option. It separates the airflow to the control section and the heatsink, and makes it possible to mount the heatsink of the drive outside the enclosure. In support of this option the heatsink side of the module has IP 55 enclosure class standard on all frame R2 - R6 ACS800-U4 modules. Prevention of unexpected start-up (complies with EN954-1, category 3) is also available as an option.

Compact power - frame sizes R7 and R8

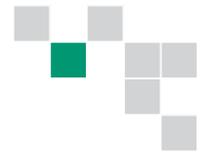

Frame size R7 and R8 modules have a very narrow bookshelf design. They are designed to be mounted either on the cabinet wall or floor. The power range is from 100 to 600 Hp and the voltage range is from 230 V up to 690 V. The enclosure class is IP 00.

These modules have top entry for the input power connections to optimise the use of space and cable routing in the cabinet. The output power connections are on the side to make access to the cables as easy as possible and to give sufficient space for cable bending. The outputs can be placed either on the left or right hand side of the module. I/O connections can be located in the most optimal place in the cabinet as they are in a separate unit.

Single drive modules

ACS800-U4/04, 1 to 600 Hp

Compact and complete drive

The ACS800-U4 frame R2 - R6 offers all that you need in a single, extremely small, panel-mounted package making it a compact and complete drive. The standard degree of protection is IP20 for the control section and IP55 for the power section. Power ratings start from 1 Hp heavy-duty rating and go up to 200 Hp continuous load rating. There are five different mechanical frame sizes covering the power range. Each frame size is optimized for performance, size and weight.

The ACS800-U4 frames R7 and R8 extend the power range of the module line to 600 Hp. These frames are panel or cabinet floor mountable with input power connected to the top and output connection field selectable for left or right side exit.

Everything inside

From the smallest to the largest ACS800-U4 there is an extensive range of built in features and options. Standard features include an AC Line Choke for harmonic filtering and drive protection, extensive and flexible I/O. A brake chopper is included as standard in the two smallest frame sizes R2 and R3 as well as in the 690V R4 frame. In other frames the chopper is a built in option. Other built in options include a user-friendly control panel with Start-Up Assistant, EMC filters and extension modules for additional I/O, fieldbus and pulse encoder interface modules.

Main standard hardware features

- Panel mounting (frames R2 - R6)
- Mounting on the panel or floor (frames R7 - R8)
- IP 20 for the control section and IP55 for the power section (R2 - R6 at 240V and 500V)
- IP 00 enclosure class (frames R7 - R8)
- Compact design
- Harmonic filtering AC choke inside
- Input rectifier protection
- Brake chopper (frames R2 - R3; R4 only 690 V)
- Long lifetime cooling fan and capacitors
- Extensive, programmable I/O with galvanically isolated inputs
- Three I/O and fieldbus extension slots inside
- Alphanumeric, multilingual control panel with start-up assistant feature
- Large power terminals allowing use of a wide range of cable sizes
- Instruction available for installing modules in Rittal TS8 cabinet (frames R7 - R8)
- Common module filters for motor protection (R8)

Options for ACS800-U4

Built in options:

- Alphanumeric, multilingual control panel with start-up assistant feature
- Brake chopper (frames R4 - R8)
- EMC filter for 1st environment, restricted distribution according to EN 61800-3 (frames R2 - R6)
- EMC filter for 2nd environment, unrestricted distribution according to EN 61800-3 (Category C3)
- Analog and digital I/O extension modules
- Fieldbus modules (Communication)
- Pulse encoder interface module
- Resolver interface (Limited SW Support)
- Prevention of unexpected start-up
- Bottom exit of motor cables (frame R7)
- Common mode filters for motor protection (R7)

External options:

- Brake resistor
- Output du/dt filters
- Flange mounting

NOTES:

- ⁽¹⁾ Overload may be limited to 5% at higher motor speeds (speed >90% motor base speed) by the internal power limit of the drive
- ⁽²⁾ Overload may be limited to 40% at higher motor speeds (speed >90% motor base speed) by the internal power limit of the drive
- ⁽³⁾ Rating not applicable for all motors. Available for some 4-pole 460V high efficiency NEMA motors.

I_{max} current available for 10 seconds at start.
 I_{2N} continuous base current at 40°C (104°F). Overload cycle 110%
 I_{2N} for 1 minute / 5 minutes allowed.
 I_{2hd} continuous base current at 40°C (104°F). Overload cycle 150%
 I_{2hd} for 1 minute / 5 minutes allowed.

- Current ratings do not change with different supply voltages.
- Horsepower ratings are based on NEMA motor ratings for typical 4-pole motors (1800 rpm). Check motor nameplate current for compatibility.

NOTES:

- ⁽¹⁾ Overload may be limited to 5% at higher motor speeds (speed >90% motor base speed) by the internal power limit of the drive
- ⁽²⁾ Overload may be limited to 40% at higher motor speeds (speed >90% motor base speed) by the internal power limit of the drive
- ⁽³⁾ Rating not applicable for all motors. Available for some 4-pole 460V high efficiency NEMA motors.

I_{max} current available for 10 seconds at start.
 I_{2N} continuous base current at 40°C (104°F). Overload cycle 110%
 I_{2N} for 1 minute / 5 minutes allowed.
 I_{2hd} continuous base current at 40°C (104°F). Overload cycle 150%
 I_{2hd} for 1 minute / 5 minutes allowed.

- Current ratings do not change with different supply voltages.
- Horsepower ratings are based on NEMA motor ratings for typical 4-pole motors (1800 rpm). Check motor nameplate current for compatibility.

Enclosure

Multidrive Modules

The multidrive modules require more integration than single drive modules. Application support from ABB sales is necessary to ensure proper selection of modules, cabinet accessories and components.

The ACS800 multidrive module product series includes rectifier- and DC-supplied inverter modules and accessories especially designed for integrators, OEMs and panel builders.

The ACS800 multidrive principle based on a common DC bus arrangement enables single power entry and common braking resources for several drives. Common braking includes the possibility for regenerative braking and motor-to-motor braking depending on the motor loads in the line-up.

Special design for system integrators

The design of these modules is based on much smaller inverter modules.

The modules have a plug-in connector, meaning fast and easy assembling. The modules are also equipped with wheels, so they can easily be pulled out of the cabinet and pushed back for maintenance purposes.

This concept also allows pre-installation of the power cables in the empty cabinet.

Inverter and diode modules can be freely connected parallel for higher output current. This means a limited number of different module sizes and fewer spare parts.

The modularity, compact size and simplicity of the modules means a lot of savings for cabinet builders in terms of minimizing the number of cabinets and the widths.

Besides the compact design, the new ACS800 DC-supplied inverter and rectifier units include an extensive selection of options.

Product range

Inverter modules

Inverter modules are available in 7 different frame sizes. Frame sizes R2i - R7i start from 1 to 200 Hp, and all the powers from 100 to 2200 Hp are different configurations of R8i units, single or in parallel. The voltage range covers 380 V, 500 V and 690 V.

Supply modules

Supply modules are available as diode-, thyristor- or IGBT-based solutions.

- In the diode supply units (DSU) only four different types of unit, either in single or parallel, cover the power range of 145 to 4200 kW in 380 - 690 V.

The basic features of the diode rectifier unit include automatic adaptation to 6 or 12-pulse operation and automatic control to charge the inverter capacitor banks during start-up.

The mechanical dimensions are the same in each module, making engineering and assembling very easy.

- An IGBT Supply unit (ISU) is used in fully regenerative drive systems. In power control it gives the same firm and gentle performance as DTC gives in motor control. The power module is hardware compatible with the inverter module. In passive mode the converter operates as the rectifier. In the active mode the IGBTs are controlled to keep the DC voltage constant and the line current sinusoidal.

Harmonic content remains extremely low due to DTC control and LCL filtering.

The power range is from 60 kW up to 1975 kW in 380 - 690 V. Modules are single or parallel connected.

Braking choppers and resistors

In resistor braking whenever the voltage in the intermediate circuit of a frequency converter exceeds a certain limit, a braking chopper connects the circuit to a braking resistor. The brake chopper is a separate module in the lineup.

Standard resistors are also available, but non-standard resistors can be used, however they must be checked case-by-case.

The power range is from 230 kW up to 2400 kW in 380 - 690 V.

Multidrive Modules

Main standard hardware features:

- Optimized design for cabinet assembly
- Frame R2i - R5i control board inside the module
- Frame R7i - nxR8i control board outside the module
- Extensive, programmable I/O with galvanically isolated inputs
- Block programming possibility
- Harmonic filtering choke inside R2i - R6i
- Three I/O and fieldbus extension slots
- Modular design allowing wide variety of variants
- Compact design
- Long lifetime cooling fan and capacitors
- Du/dt filters as standard in parallel connected R8i and in single or parallel connected 690 V inverter units
- Mounting on the cabinet wall for R2i - R7i and on the cabinet floor for R8i and the D3/D4 supply module
- Wheels and plug connectors in the R8i inverter and
- Coated boards
- LCL-filter units in ISUs

Main optional hardware features:

Inverter frame sizes R2i - R7i:

- Prevention of unexpected start-up
- DC fuses, fuse bases or DC-fuse switch
- Mechanics for tilted position assembly in R2i - R5i frame size
- Assembly plates for R7i units
- du/dt filters
- common mode filter for motor protection
- on-off control for cooling fan with internal charging option
- Mechanical accessories in Rittal TS8 cabinets (R7i only):
 - NEMA 1 Filt./NEMA 12 door/roof mechanical kits
 - Accessories kits

Inverter frame sizes R8i - nxR8i:

- Prevention of unexpected start-up
- DC fuses, fuse bases or DC-fuse switch + charging circuitry
- du/dt filters as options in 400 / 500 V
- Common mode filters for motor protection
- Mechanical accessories in Rittal TS8 cabinets:
 - NEMA 1 Filt./NEMA 12 door/roof mechanical kits
 - Accessories kits

DSU frame sizes D3 - nxD4:

- Contactor (inside the module)
- RFI filter up to 1000 A
- Front end AC-fuses
- Air circuit breaker
- Mechanical accessories in Rittal TS8 cabinets:
 - NEMA 1 Filt./NEMA 12 door/roof mechanical kits
 - Accessories kits

Dimensions:

Frame	Imperial Units (in)&(lb)			
	Height	Width	Depth	Weight
R2i	15.7	6.5	7.6 ³⁾	20
R3i	18.3	6.8	9.1 ³⁾	26
R4i	20.6	9.4	9.9 ³⁾	33
R5i	26.5	10.4	10.8 ³⁾	51
R7i ¹⁾	38.0	6.6	16.0	82
R8i ²⁾	55.0	9.2	23.4	331

Notes:

- 1) Dimensions do not include cooling fan.
- 2) For multi-use modules; multiply weight, widths and air flow by the number of modules
- 3) The depth is without control panels and options.

I_{2N}: continuous current allowing 110% I_N for 1 min / 5 min at 40°C.
P_{2N}: typical motor power in light-overload use.

I_{hd}: continuous current allowing 150% I_{hd} for 1 min / 5 min at 40°C.
P_{hd}: typical motor power in heavy-duty use.

- The current ratings are the same regardless of the supply voltage within one voltage range.
- The ratings apply in 40°C ambient temperature.
In lower temperatures the ratings are higher (except I_{max}).
- The rated current of the ACS800 must be higher than or equal to the rated motor current to achieve the rated motor power given in the table.

Notes:

- Dimensions do not include cooling fan.
- For multi-use modules; multiply weight, widths and air flow by the number of modules
- Cable connections need additional space (about 200 mm) behind the module.
- Supply modules + filters.
- Supply modules + choke.

I_{2N}: continuous current allowing 110% I_N for 1 min / 5 min at 40°C.
P_{2N}: typical motor power in light-overload use.

I_{hd}: continuous current allowing 150% I_{hd} for 1 min / 5 min at 40°C.
P_{hd}: typical motor power in heavy-duty use.

- The current ratings are the same regardless of the supply voltage within one voltage range.
- The ratings apply in 40°C ambient temperature. In lower temperatures the ratings are higher (except I_{max}).
- The rated current of the ACS800 must be higher than or equal to the rated motor current to achieve the rated motor power given in the table.

Brake options

Brake chopper

The ACS800 series has built in brake choppers for all types. Therefore, no additional space or installation time is needed. The brake chopper is part of the standard delivery for the frame sizes R2 - R3 and at 690V frame R4. For the other frames a brake chopper is a selectable option.

Braking control is integrated into the ACS800 series through frame R8. It controls the braking, supervises the system status and detects failures such as brake resistor and resistor cable short circuits, chopper short circuit, and calculated resistor overtemperature.

Brake resistor

Brake resistors are separately available for all ACS800 types. Resistors other than the standard resistors may be used providing the specified resistance value is not decreased, and the heat dissipation capacity of the resistor is sufficient for the drive application.

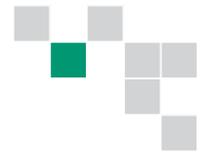

For ACS800 units, no separate fuses in the brake circuit are required if the following conditions are met:

- The ACS800 mains cable is protected with fuses
- No mains cable/fuse overrating takes place

SAFUR210F575	1320	300 ¹⁾	345	27 ¹⁾

¹⁾ Single module only.

P_{br,max} = Maximum braking power of the NBRA-6xx chopper and SAFUR resistor combination.
The chopper will withstand this braking power for one minute every ten minutes.

Note: The braking energy transmitted to the resistor during any period shorter than 400 seconds may not exceed E_r.

The standard resistor therefore withstands continuous braking of P_{br,max} typically 20 to 40 seconds (t = E_r / P_{br,max}).

R = Recommended brake resistor resistance. Also nominal resistance of corresponding SAFUR resistor.

I_{max} = Maximum peak current per chopper during braking. Current is achieved with minimum resistor resistance.

I_{rms} = Corresponding rms current per chopper during load cycle.

Heat loss of brake chopper is 1 % of braking power.

Heat loss of section with brake resistors is the same as braking power.

EMC filter options

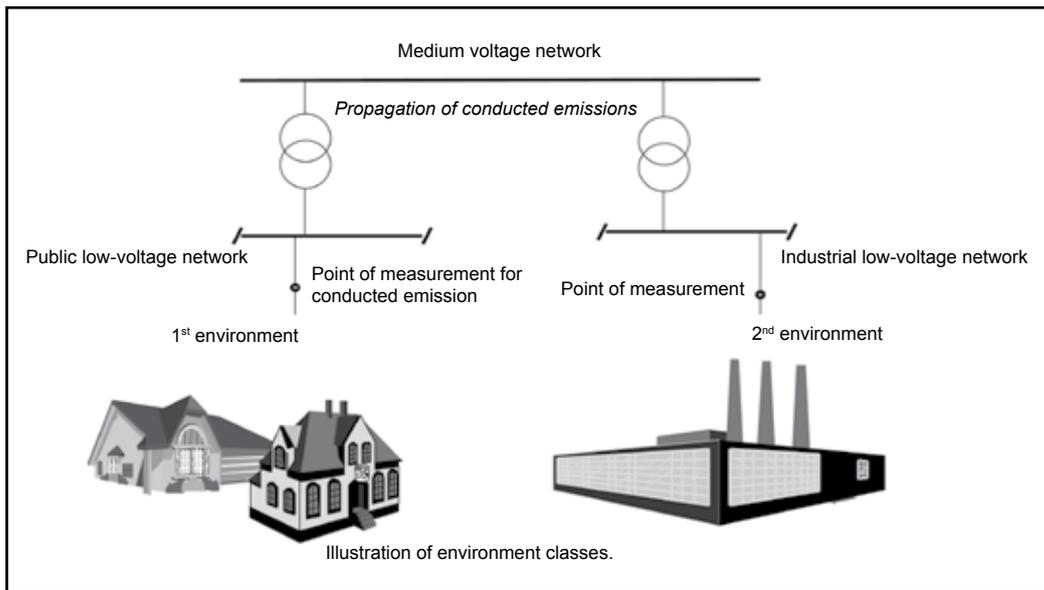

1st environment vs 2nd environment

1st environment

1st environment includes domestic premises. It also includes establishments directly connected without intermediate transformer to a low-voltage power supply network which supplies buildings used for domestic purposes.”

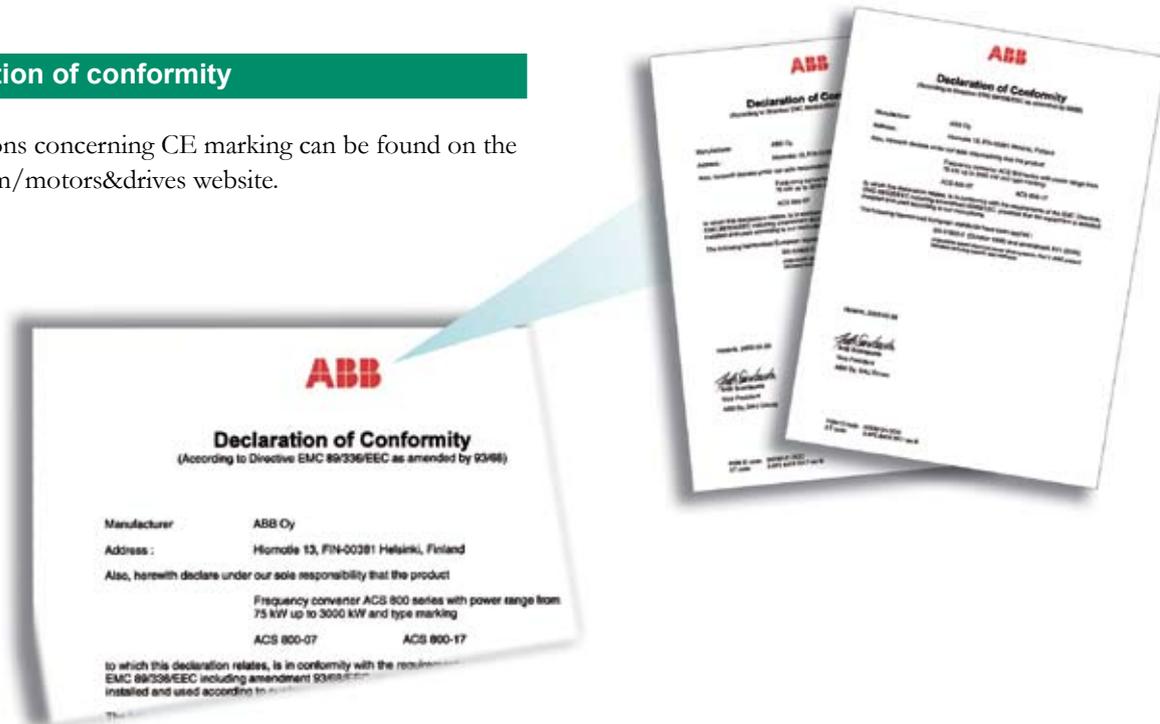

2nd environment

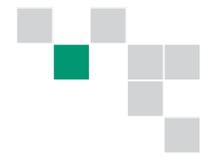

2nd environment includes all establishments other than those directly connected to a low-voltage power supply network which supplies buildings used for domestic purposes.”

Declaration of conformity

All declarations concerning CE marking can be found on the www.abb.com/motors&drives website.

EMC filter options

EMC - Electromagnetic Compatibility and modules

The electrical/electronic equipment must be able to operate without problems within an electromagnetic environment. This is called immunity. The ACS800 is designed to have adequate immunity against interference from other equipment. Likewise, the equipment must not disturb or interfere with any other product or system within its locality. This is called emission. Each ACS800 model can be equipped with an inbuilt filter to reduce high frequency emission.

EMC standards

The EMC product standard [EN 61800-3 (1996) + Amendment A11 (2000)] covers the requirements stated for drives within the EU. The new revision of EN 61800-3 (2004) product standard can be applied from now on, but latest from 1 October 2007. In some cases other standards may be applicable. The emission limits are comparable according to the following table, EMC standards.

Selecting an EMC filter

The following table gives the correct filter selection.

EMC standards				
EN 61800/A11, (2000), product standard	EN 61800-3 (2004), product standard	EN 55011, product family standard for industrial, scientific and medical (ISM) equipment	EN 6100-6-4, generic emission standard for industrial environments	EN 61000-6-3, generic emission standard for residential, commercial and light-industrial environment
1 st environment, unrestricted distribution	Category C1	Group 1 Class B	Not applicable	Applicable
1 st environment, restricted distribution	Category C2	Group 1 Class A	Applicable	Not applicable
2 nd environment, unrestricted distribution	Category C3	Group 2 Class A	Not applicable	Not applicable
2 nd environment, restricted distribution	Category C4	Not applicable	Not applicable	Not applicable

Sine filter options

ABB sine filter solution

The ACS800 sine filter solution is an ACS800 industrial drive equipped with a sine filter. It enjoys most of the premium features of the standard ACS800 industrial drive. The LC filter suppresses the high frequency components of the output voltage.

This means that the output voltage waveform is almost sinusoidal without high voltage peaks.

Filters are available in IP 00 degree of protection over the whole power range. The ACS800-U1 power range also has NEMA 1 filters available. The ACS800-U7/07 drive sine filters are complete cabinet-built units.

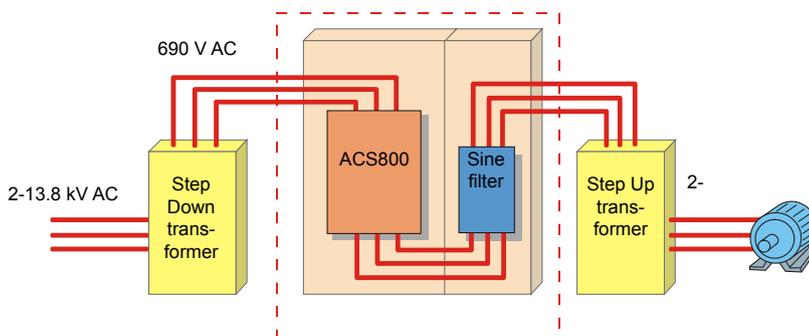

The ABB sine filter solution can be used in a variety of applications:

- Motor does not have adequate insulation for VSD duty
- Total motor cable length is long e.g. there are a number of parallel motors
- Step-up applications e.g. medium voltage motor needs to be driven
- Step-down applications
- There are industry specific requirements for peak voltage level and voltage rise time
- Motor noise needs to be reduced
- Maximum safety and reliability is needed in e.g. explosive applications
- Submersible pumps with long motor cables e.g. in the oil industry

Main features

- Optimized LC filter design that takes into account switching frequency, voltage drop and filtering characteristics
- Proven technology as ABB has delivered hundreds of sine filter solutions over the last 20 years in a wide range of applications.
- Cost effective solution
- Standard software has all the parameters that need to be set

Feature	Benefit	Note
Sinusoidal output voltage	No additional stress on the motor insulation: non-VSD compliant motors can be used, motor reliability and lifetime are maximized.	
	Allows the use of transformers in the drive output to match any required motor voltage.	Voltage drop at motor cable can be compensated with transformer i.e. there are no restrictions to motor cable length.
	Standard distribution transformer can be used in step-up solutions.	High starting torque is available with special transformer design.
	Less motor noise.	Usually the motor fan is the biggest noise source with sine filter solutions.
AP programming, advanced IR-compensation and flux control	The effects of load changes to motor voltage can be compensated i.e. the motor always has the optimum voltage.	Scalar control is required with sine filters.

Sine filter option

Types and ratings for ACS800-U4

NOTES:

- ¹⁾ Air flow of the drive.
- ²⁾ Combined air flow of the drive and the filter.
- ³⁾ Dimensions are approximations for a cabinet that can house the filter. Weight is approximately the total weight of the cabinet and the filter. The filter assembly is supplied as loose items, which include choke modules, capacitors and cooling fan.

Sine filters listed above are not UL rated.
Sine filters have extended lead times

Nominal Ratings:

I_{cont.max} rated current of the drive-filter combination available continuously without overload at 40 °C.

Typical Ratings:

P_{cont.max} typical motor power.

Notes:

Noise level is a combined value for the drive and the filter. Heat dissipation is a combined value for the drive and filter

du/dt output filter options

du/dt output filters and the ACS800

du/dt output filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high frequency emission of the motor cable as well as high frequency losses and bearing currents in the motor.

The need for du/dt filtering depends on the motor insulation. For information on the construction of the motor insulation, consult the motor manufacturer. If the motor

does not fulfill the following requirements, the lifetime of the motor might decrease.

Insulated N-end (non-driven end) bearings and/or common mode filters are also required for motor bearing currents with motors bigger than 100 kW. For more information please see the ACS800 hardware manuals.

Filter selection table for ACS800

Motor type	Nominal mains voltage (U_N)	Motor insulation requirement
ABB M2 and M3 motors	$U_N \leq 500$ V	Standard insulation system.
	500 V < $U_N \leq 600$ V	Standard insulation system in conjunction with du/dt filtering or reinforced insulation.
	600 V < $U_N \leq 690$ V	Reinforced insulation system in conjunction with du/dt filtering.
ABB form-wound HXR and AM motors	380 V < $U_N \leq 690$ V	Standard insulation system.
ABB random-wound HXR and AM motors	380 V < $U_N \leq 690$ V	Check motor insulation system with the motor manufacturer. du/dt filtering with voltages over 500 V.
Non-ABB Random-wound and Form-wound	$U_N \leq 420$ V	Insulation system must withstand $\hat{U}_{LL}=1300$ V.
	420 V < $U_N \leq 500$ V	If the insulation system withstands $\hat{U}_{LL}=1600$ V and $\Delta t=0.2$ μ s, du/dt filtering is not required. With du/dt filtering, the insulation system must withstand $\hat{U}_{LL}=1300$ V.
	500 V < $U_N \leq 600$ V	If the insulation system withstands $\hat{U}_{LL}=1800$ V, du/dt filtering is not required. With du/dt filtering, the insulation system must withstand $\hat{U}_{LL}=1600$ V.
	600 V < $U_N \leq 690$ V	If the motor insulation system withstands $\hat{U}_{LL}=2000$ V and $\Delta t=0.3$ μ s, du/dt filtering is not required. With du/dt filtering, the insulation system must withstands $\hat{U}_{LL}=1800$ V.

Symbol	Explanation
U_N	Nominal AC Line voltage.
U_{LL}	Peak line to line voltage at motor terminals.
Δt	Rise time, i.e. interval during which line to line voltage at motor terminals changes from 10% to 90% of full voltage range.

Applicability

Separate filters need to be mounted separately. Unprotected IP 00 filters must be placed into an enclosure of adequate degree of protection.

External du/dt filters for ACS800-U4

** 3 filters included, dimensions apply for one filter.

Standard user interface

Control panel

The industrial drive control panel has a multilingual alphanumeric display (4 lines x 20 characters) with plain text messages in 14 languages.

The control panel is removable and can be mounted on the drive enclosure or remotely.

```
1 L -> 1242.0 RPM 1
SPEED 1242.0 RPM
CURRENT 76.00 A
TORQUE 86.00 %
```

Start-up assistant

Easy commissioning with the start-up assistant. The start-up assistant actively guides you through the commissioning procedure step by step. It also has a unique on-line help function.

```
MOTOR SETUP 4/10
MOTOR NOM CURRENT ?
(75.5 A)
ENTER: OK RESET: BACK
```

Actual value display

The control panel can display three separate actual values simultaneously.

Examples of these are:

- Motor speed
- Frequency
- Current
- Torque
- Power
- References
- DC bus voltage
- Output voltage
- Heatsink temperature
- Operating hours
- Kilowatt hours
- I/O status

Fault memory

A built in fault memory stores information relating to the last 64 faults, each with a time stamp.

```
1 L -> 1242.0 RPM 1
2 LAST FAULT
OVERVOLTAGE
1121 H 1 MIN
```

Parameter copying

Parameter copy feature allows all drive parameters to be copied from one frequency converter to another simplifying commissioning.

```
1 L -> 1242.0 RPM 1
UPLOAD <=<=<=<
DOWNLOAD =>=>=>=>
CONTRAST 4
```

Centralized control

One panel can control up to 31 drives.

```
> > < >
1 21 40 100
>
111
```

Easy programming

Parameters are organized into groups for easy programming.

```
1 L -> 1242.0 RPM 1
11 REFERENCE SELECT
3 EXT REF 1 SELECT
R11
```

The ACS800 keypad is backward compatible to the ACS600.

Standard user interface

Standard I/O

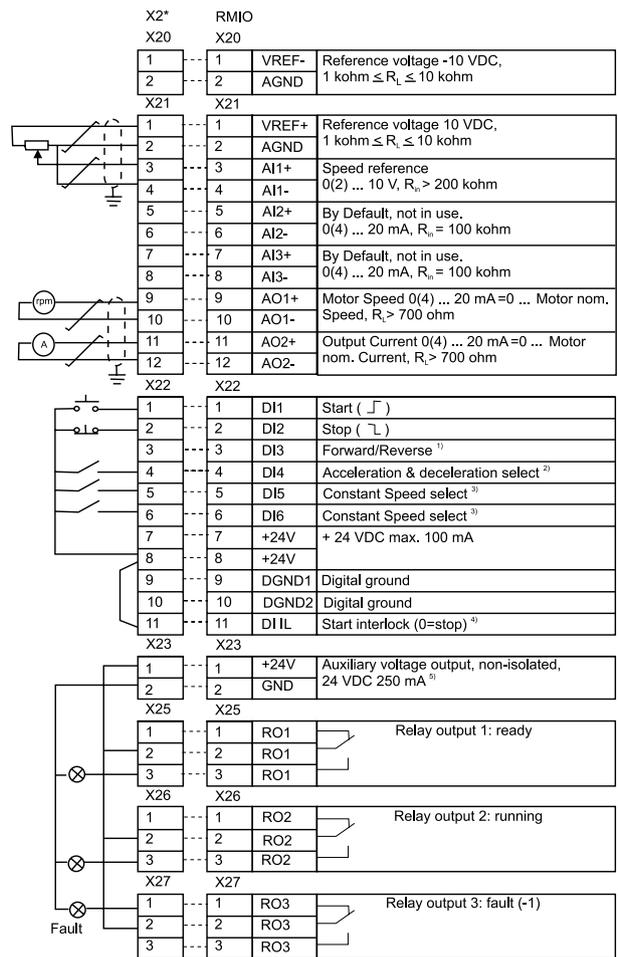

Analog and digital I/O channels are used for different functions such as control, monitoring and measurement purposes (e.g. motor temperature). In addition, optional I/O extension modules are available providing additional analog or digital I/O connections.

Below are the standard drive control I/O of the ABB industrial drive for the Factory Macro. For other ACS800 application macros the default functions may be different.

Standard I/O on RMIO-01 Board

- **3 analog inputs:** differential, common mode voltage ± 15 V, galvanically isolated as a group.
 - One $\pm 0(2) \dots 10$ V, resolution 12 bit
 - Two $0(4) \dots 20$ mA, resolution 11 bit
- **2 analog outputs:**
 - $0(4) \dots 20$ mA, resolution 10 bit
- **7 digital inputs:** galvanically isolated as a group (can be split in two groups)
 - Input voltage 24 V DC
 - Filtering (HW) time 1 ms
- **3 digital (relay) outputs:**
 - Form C contacts
 - 24 V DC or 115/230 V AC
 - Max. continuous current 2 A
- **Reference voltage output:**
 - ± 10 V $\pm 0.5\%$, max. 10 mA
- **Auxiliary power supply output:**
 - +24 V $\pm 10\%$, max. 250 mA

Additional I/O options

Standard I/O can be extended by using analog and digital extension modules or pulse encoder interface modules which are mounted in the slots on the ASC800 control board. The control board has two slots available for extension modules. More extension modules can be added with the I/O exten-

sion adapter which has three additional slots. The available number and combination of I/O's depends on the control software used. The standard application software supports 2 analog, 2 digital extension modules and 1 encoder interface module.

Optional I/O

Analog I/O extension module RAIO-01 (+L500)

- **2 analog inputs:** galvanically isolated from 24 V supply and ground
 - $\pm 0(2)\dots 10$ V, $0(4)\dots 20$ mA or $\pm 0\dots 2$ V, resolution 12 bits
- **2 analog outputs:** galvanically isolated from 24 V supply and ground
 - $0(4)\dots 20$ mA, resolution 12 bit

Digital I/O extension module RDIO-01 (+L501)

- **3 digital inputs:** individually galvanically isolated
 - Signal level 24 to 250 V DC or 115/230 V AC
- **2 relay (digital) outputs:**
 - Form C contacts
 - 24 V or 115/230 V AC
 - Max. 2 A

Pulse encoder interface module RTAC-01 (+L502)

- **1 incremental encoder input:**
 - Channels A, B and Z (zero pulse)
 - Signal level and power supply for the encoder is 24 or 15 V
 - Single ended or differential inputs
 - Maximum input frequency 200 kHz

Resolver Interface Module (Limited SW Support)

I/O extension adapter AIMA-01

- Three slots for I/O extension modules
- Connection to the ACS800 control board through fiber optic link
- Dimensions: 3.1 × 12.8 × 1.1 in
- Mounting: onto 1.4 × 0.3 in DIN rail
- External power supply connection
- Supply voltage: 24 V DC $\pm 10\%$
- Current consumption: depends on connected I/O extension modules. (Recommend 1A 24 Vdc supply)

Communications options

Fieldbus control

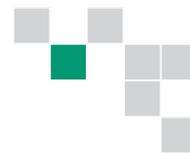

ABB industrial drives have connectivity to most major automation systems. This is achieved with a dedicated gateway concept between the fieldbus systems and ABB drives.

The fieldbus gateway module can easily be mounted inside the drive. Because of the wide range of fieldbus gateways, your choice of automation system is independent of your decision to use first-class ABB AC drives.

Manufacturing flexibility

Drive control

The drive control word (16 bit) provides a wide variety of functions from start, stop and reset to ramp generator control. Typical setpoint values such as speed, torque and position can be transmitted to the drive with 15 bit accuracy.

Drive monitoring

A set of drive parameters and/or actual signals, such as torque, speed, position, current etc., can be selected for cyclic data transfer providing fast data for operators and the manufacturing process.

Drive diagnostics

Accurate and reliable diagnostic information can be obtained via the alarm, limit and fault words, reducing the drive downtime and therefore the downtime of the manufacturing process.

Drive parameter handling

Total integration of the drives in the production process is achieved by single parameter read/write up to complete parameter set-up or download.

Reduced installation and engineering effort

Cabling

Substituting the large amount of conventional drive control cabling with a single communication cable reduces costs and increases system reliability.

Design

The use of fieldbus control reduces engineering time at installation due to the modular structure of the hardware and software.

Commissioning and assembly

The modular machine configuration allows pre-commissioning of single machine sections and provides easy and fast assembly of the complete installation.

Currently available gateways

Fieldbus	Protocol	Device profile	Baud rate
PROFIBUS (+K454)	DP, DPV1	PROFIdrive ABB Drives *)	9.6 kbit/s - 12 Mbit/s
DeviceNet (+K451)	-	AC/DC drive ABB Drives *)	125 kbit/s - 500 kbit/s
ControlNet (+K462)	-	AC/DC drive ABB Drives *)	5 Mbit/s
Modbus (+K458)	RTU	ABB Drives *)	600 bit/s - 19.2 kbit/s
Ethernet (+K466)	Modbus/TCP Ethernet/IP	ABB Drives *)	10 Mbit/s / 100 Mbit/s
CANopen (+K457)	-	Drives and motion control ABB Drives*)	10 kbit/s - 1 Mbit/s
InterBUS-S (+K453)	I/O, PCP	ABB Drives*)	500 kbit/s

*) Vendor specific profile

NOTE:

Additional Fieldbus module options are available. Contact your local ABB representative for more information.

Additional options

Remote monitoring and diagnostics tool

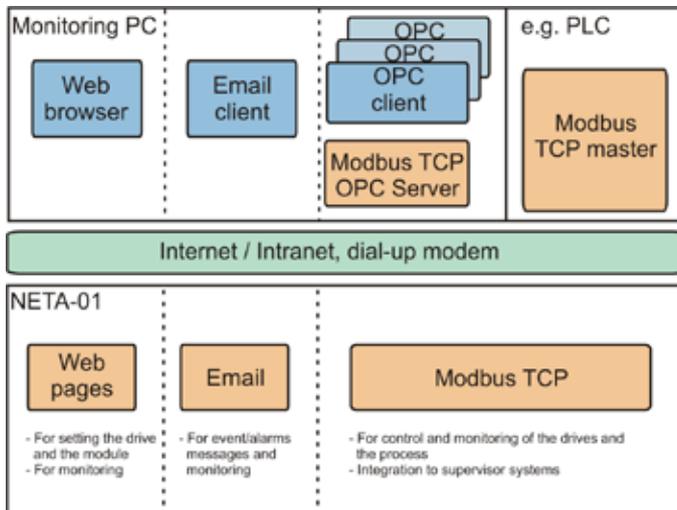

Browser-based, user-friendly

The intelligent ethernet NETA-01 module gives simple access to the drive via the internet, communicating via a standard web browser. The user can set up a virtual monitoring room wherever there is a PC with an internet connection or via a simple dial-up modem connection. This enables remote monitoring, configuration, diagnostics and, when needed, control. The drive can also provide process related information, such as load level, run time, energy consumption and I/O data, the bearing temperature of the driven machine, for instance.

This opens up new possibilities for the monitoring and maintenance of unmanned applications across a range of industries, for instance water, wind power, building services and oil & gas, as well as any application where the user needs access to the drives from more than one location. The NETA-01 also provides an opportunity for OEMs and system integrators to support their installed base globally.

No PC needed at local end

The intelligent ethernet module has an embedded server with the necessary software for the user interface, communication and data storage. This gives ease of access, realtime information and the possibility for two-way communication with the drive, enabling immediate response and actions, saving time and money. This is possible without using a PC at the local end, as required by other remote solutions.

Powerful and versatile

Up to nine drives can be connected to the intelligent ethernet module via fiber optic links. It is available as an option for new drives, as well as an upgrade for existing systems. Access to the module is secured by user ID and passwords.

The intelligent ethernet NETA-01 module connects to the drive with fiber optic cables. The size of the module is 3.7(h) x 1.4 (w) x 3.0 (d) in

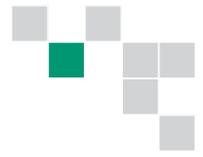

The web page of the module is opened like any other web address. The home page shows a general overview of the system with traffic lights and action buttons to guide the user through the different sections.

Features

- Virtual monitoring room for
 - Monitoring
 - Configuration of parameters
 - Diagnostics
 - Control, if needed
- Browser-based access via
 - Intra-/extra-/internet or
 - Simple dial-up modem connection
- No PC needed at the local end
- Can be used as a Modbus/TCP bridge for process control
- The NETA-01 module may be used in conjunction with other Fieldbus modules from the previous page

Standard application software

Standard application software

Based on ABB's exclusive Direct Torque Control technology, the ACS800 offers highly advanced features as standard. The ACS800 standard application software provides solutions to virtually all AC drives applications.

Adaptive programming

In addition to parameters, industrial drives have the possibility for function block programming as standard. Adaptive programming with 15 programmable function blocks makes it possible to replace relays or even a PLC in some applications. Adaptive programming can be done either by standard control panel or DriveAP, a user-friendly PC tool.

The standard application macros

The ACS800 features built in, pre-programmed application macros for configuration of such parameters as inputs, outputs and signal processing.

- FACTORY SETTINGS for basic industrial applications
- HAND/AUTO CONTROL for local and remote operation
- PID CONTROL for closed loop processes
- SEQUENTIAL CONTROL for repetitive cycles
- TORQUE CONTROL for processes where torque control is required
- USER MACRO 1 & 2 for user's own parameter settings

Software features

A complete set of standard software features offers premium functionality and flexibility.

- Accurate speed control
- Accurate torque control without speed feedback
- Adaptive programming
- Automatic reset
- Automatic start
- Constant speeds
- Controlled torque at zero speed
- DC hold
- DC magnetizing
- Diagnostics

- Flux braking
- Flux optimization
- IR compensation
- Master/follower control
- Mechanical brake control
- Motor identification
- Parameter lock
- Power loss ride-through
- Process PID control
- Programmable I/O
- Scalar control
- Speed controller tuning
- Start-up assistant
- Support for sine filter in the drive output
- Trim function
- User-selectable acceleration and deceleration ramps
- User adjustable load supervision/limitation

Pre-programmed protection functions

A wide range of features provides protection for the drive, motor and the process.

- Ambient temperature
- DC overvoltage
- DC undervoltage
- Drive temperature
- Input phase loss
- Overcurrent
- Power limits
- Short circuit

Programmable protection functions

- Adjustable power limits
- Control signal supervision
- Critical frequencies lock-out
- Current and torque limits
- Earth fault protection
- External fault
- Motor phase loss
- Motor stall protection
- Motor thermal protection
- Motor underload protection
- Panel loss

Optional application software

Control solutions for different applications

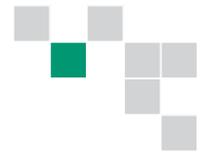

ABB provides a set of ready-made control solutions for specific industrial AC drive applications. Such software adds application-dedicated features and protection without an external PLC - improving productivity and reducing costs.

Main advantages of ABB's control solutions

- Application-dedicated features
- Improved production
- No external PLC
- User-friendly
- Easy to use
- Energy savings
- Smooth power loss ride-through
- Reduced costs
- Adaptive protection

Master/follower control

Reliable control via the fiber optic link of several drives when they are controlled by one master. This is needed e.g. if the motor shafts are coupled together. The master/follower function enables the load to be evenly distributed between the drives.

Pump control

Intelligent pump control software is a combination of traditional PFC which is specially designed for multi-motor pumping (or compressor, etc.) stations. While directly controlling one motor, the drive is able to start additional, direct-on-line motors whenever a higher capacity is needed.

Multipump function

Additional features such as the multipump function are designed for pumping stations that consist of multiple pumps, each controlled by a separate drive. The drives can be connected so that in the case of pump failure or maintenance action on one drive, the remaining drives continue operation - having 100% redundancy. There is an autochange function to alternate between the pumps so all pumps have equal operating time and wear.

Level control function

The liquid level of a container can be used as a process variable for a pumping station either filling or emptying the container when the level control function is activated. Three drives can be used in a master/follower configuration.

Flow calculation

The flow calculation contains a function that enables reasonably accurate calculation of flow without the installation of a separate flow meter.

Anti-jam function

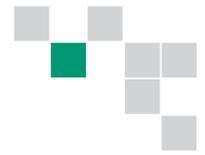

The anti-jam function can be used for preventing solids from building up on pump impellers. The anti-jam procedure consists of a programmable sequence of forward and reverse runs of the pump, effectively shaking off any residue on the impeller.

Progressive Cavity Pump

Software to provide protection and optimization for Progressive Cavity Pumps and Electrical Submersible Pumps for the Oil and Gas industry. The software is designed to protect the pump rods from over torque situation during adverse conditions and provides safe shutdown through controlled backspin. It also provides for input from external sensors for further protection and returns feedback in pump terminology (rod speed and torque etc.).

Optional application software

Control solutions for different applications

Centrifuge control

Practical programmable sequences for conventional centrifuges. Integrated decanter control for the accurate speed difference control of two shafts, where direct communication via the fiber optic link between bowl and scroll is used.

Crane drive control

Crane drive control with optimal operational safety and performance built into the drive.

- Easy installation and start-up reduces the total project costs
- Ready to use with proven crane functionality
- Accurate and fast response increases the operational productivity
- Multiple drives can be synchronized with internal fiber optic link, reducing the need for separate controllers. Everything needed is built in
- Available as single drive or multi-drive with dynamic and regenerative braking

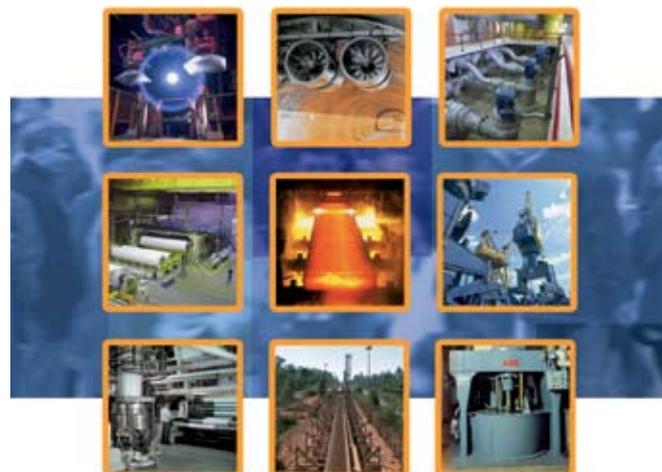

Spinning control & traverse control

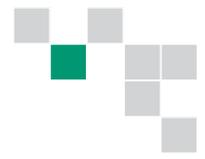

Spinning control and traverse control make a perfect pair for the precise control of spinning and traverse drives in textile machines.

Inline Control

The application software is designed for web process line Draw / Dancer / Tension control. An inline section on a process line is a section controlling the web in the machine after an extruder or unwind and before the winder or sheeter. This application program focuses on the converting and web handling industries and is commonly paired with the Center Winder/Unwind program.

- Draw Macro- Configures the drive to operate with manual speed adjustment from an operator control station.
- Dance Macro- Configures the drive to maintain setpoint dancer position based on dancer position feedback. The force on the dancer determines the tension on the web.
- Tension Macro- Configures the drive to maintain setpoint web tension based on a web force measurement device such as a loadcell. The ACS800 adjusts the speed of the section to maintain the desired web tension.
- Master-Follower communications via fiber optics are supported for process line coordination

Optional application software

Control solutions for different applications

Center Winder/Unwind

The Center Winder/Unwind software is designed for process lines. The program supports tension control of a web using dancer trim, tension trim, or torque control. Included are a diameter calculator, tension regulators, inertia compensation, and roll change logic for continuous process lines. This application program focuses on the converting and web handling industries and is commonly paired with the Inline Control program.

- Draw Macro- Configures the drive to operate with manual speed adjustment from an operator control station.
- Dance Macro- Configures the drive to maintain setpoint dancer position based on dancer position feedback. The force on the dancer determines the tension on the web.
- Tension Macro- Configures the drive to maintain setpoint web tension by varying speed or torque of the section.
 - Closed Loop Tension Control uses a web force measurement device such as a loadcell. Based on the feedback value, the ACS800 adjusts speed or torque (setup option) to maintain set point tension.
 - Open Loop Tension Control operates in torque control mode and does not require a web force measurement device. The torque required to maintain setpoint tension is calculated from setup variables.
- Master-Follower communications via fiber optics are supported for process line coordination
- Built-in diameter calculator using web velocity and spindle speed to calculate actual diameter of the wound roll. The diameter calculation is used to trim the actual speed of the spindle axis as material is wound or unwound from the spindle thus maintaining accurate surface speed.
- Built-in inertia compensation with dynamic inertia adjustment based on actual roll diameter and web density
- Support for automatic roll change.

Position Control

ABB's Position Control Software provides an ideal solution for OEM machine builders and system integrators seeking to implement accurate position control in their applications. This software incorporates accurate positioning, synchronization, and DTC performance for position control applications. This software is designed to be an optimal solution to replace systems that implement sensors and PLCs as the main control apparatus for positioning systems.

This software offers four control modes:

- Speed & Torque control
- Position & Synchronization Control

These basic position control functions are included:

- Homing and Cyclic Corrections
- Gear functions for load, motor, and synchronization
- Selectable physical units for position values (mm, inch, increment, degree, and revolution)
- Probe latching through digital inputs

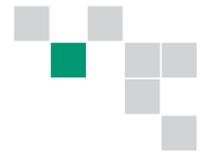

Additional Application Support

Extended I/O

An analog and digital I/O extension is typically installed on the AIMA-01 I/O extension adapters. Three extension modules can be installed on each I/O extension adapter and a fiber optic link connects the I/O extension adapters to the drive control board. The maximum number of I/O connections is 62.

Programming

Function blocks are easy to program using the DriveAP 2 PC tool. For example, there are PROFIBUS fieldbus blocks available to help users to understand the block program connections between the drive and Profibus master. Block program information, as well as text comments, symbolic names of block outputs and page header information is saved in the flash memory of the control board of the drive.

Quality dimensioning

DriveSize is a PC program for helping the user to select the optimal motor, frequency converter and transformer, especially in those cases where a straightforward selection from a catalog is not possible. Additionally it can be used to compute currents, network harmonics and to create documents about the dimensioning based on actual load. DriveSize contains the current versions of the ABB motor and frequency converter catalogs.

The default values make DriveSize simple to use, but the user is provided with ample options for drive selection. The shortcut keys make drive selection easy while giving the optimal dimensioning result. A manual selection mode is also supported.

DriveSize is currently used by more than 1,000 engineers globally.

DriveSize is for drive system components

- 3-phase standard, customized, and user defined motors
- ABB low voltage AC drives
- Transformers

DriveSize features

- Selects the optimal motor, drive unit, supply unit and transformer
- Calculates network harmonics for a single supply unit or for the whole system
- Allows importation of own motor database
- Supplies dimensioning results in graphical and numerical format
- Prints and saves the results

The DriveSize PC program can be downloaded from www.abb.com/motors&drives

General Downloads

DriveSize

DriveSize is a PC program to help select an optimal motor, frequency converter and transformer particularly in cases where a straightforward selection from a catalogue is not possible. DriveSize can also be used to compute network harmonics and to create documents about the dimensioning. It contains current versions of our motor and frequency converter catalogues.

The DriveSize software can be used in Win98, WinNT, Win2000 and WinXP operating systems. For installation instruction check the README.pdf. DriveSize has eight parts covering ACS 900 multidrives, ACS900 single drives, ACS800 multidrives, ACS800 single drives, ACS550, ACH550, ACS400 Drives 3ph and Direct on line motors.

DriveAP

Programming tool

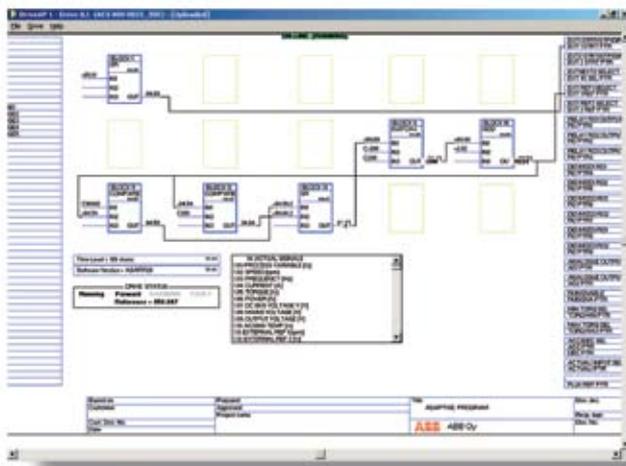

DriveAP is a PC software tool for creating, documenting, editing and downloading adaptive programs and multiblock programming programs. DriveAP 1.1 supports adaptive programming, whereas DriveAP 2 supports both adaptive programming and multiblock programming applications. The adaptive programming contains 15 function blocks and is available in a standard application. The multiblock programming application contains over 200 function blocks, and also includes PROFIBUS fieldbus and drive I/O blocks. DriveAP offers a clear and easy way to develop, test and document these programs with a PC.

It is a user-friendly tool for modifying function blocks and their connections. No special programming skills are required, a basic knowledge about block programming is enough. DriveAP supports IEC61131.

The adaptive programs are easy to document as hard copies or store as PC files. The multiblock programming with all related information is saved directly to the drive.

Upload or download

Both program types can be uploaded from connected drives and displayed graphically on a PC screen for service or documentation purposes.

DriveAP with adaptive program of standard application.

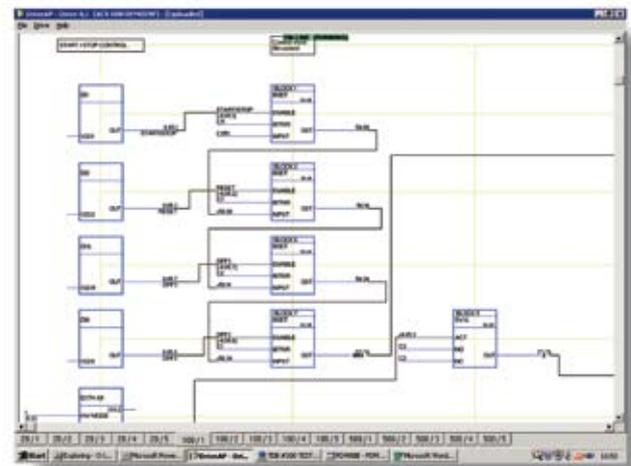

The adaptive programs and multiblock programming programs made off-line can be downloaded to any of the connected drives that support corresponding programs.

Three operating modes

- Stand-alone mode - DriveAP is not connected to a drive. The adaptive programming and multiblock programming can be carried out in the office, for example, and later downloaded to a drive.
- Off-line mode - DriveAP is connected to a drive. The adaptive programming and multiblock programming can be carried out in batch mode.
- On-line mode - DriveAP is connected to a drive. Changes to the adaptive programs and multiblock programs are written immediately to the drive and actual values are shown on the screen in real-time.

DriveAP features

- Easy-to-use tool, no special skills required
- Create and download new programs
- Document programs
- Upload existing programs from the drive
- Operating modes
 - Stand-alone
 - Off-Line
 - On-Line

DriveAP with multiblock programming application.

DriveWindow 2

Start-up and maintenance tool

ABB's DriveWindow is an advanced, easy-to-use PC software tool for the start-up and maintenance of ABB industrial AC drives. Its host of features and clear, graphical presentation of the operation make it a valuable addition to your system, providing information necessary for troubleshooting, maintenance and service, as well as training.

With DriveWindow the user is able to follow the operation of several drives simultaneously by collecting the actual values from the drives on a single screen or printout.

Additionally, the client part of DriveWindow may reside on one intranet PC, and the server on another PC closer to the drives. This enables easy plant-wide monitoring with two PCs.

High speed communication

DriveWindow uses a high-speed fibre optic cable network with DDCS communication protocol. This enables very fast communication between PC and drives. The fibre optic network is safe and highly immune to external disturbance. A fiber optic communication card inside the computer is needed.

Monitoring drives

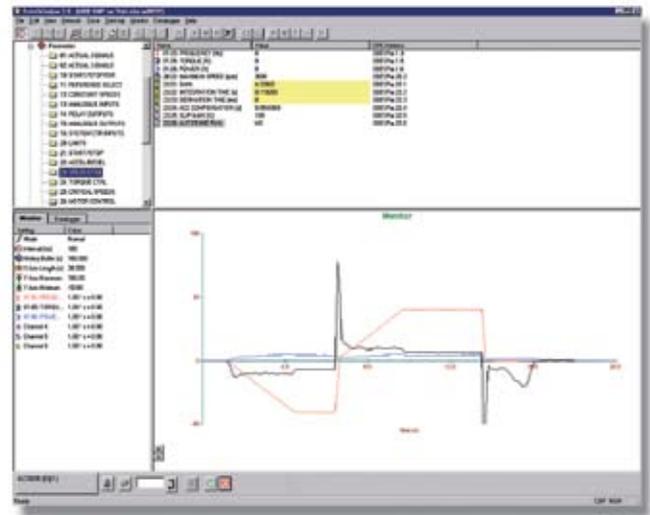

With DriveWindow you can monitor several drives simultaneously. The history buffer makes it possible to record a large amount of data in the PC's memory. The drive's data logger can be accessed with DriveWindow and viewed in graphical form. The fault logger inside the drive automatically documents every fault, warning and event which occurs. The fault history stored in the drive can be uploaded to your computer.

Versatile back-up functions

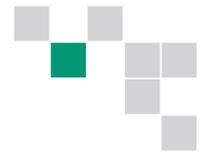

Drive parameters can be saved to the PC with DriveWindow, and can easily be downloaded back to the drive whenever needed. The same goes for the software. DriveWindow allows the entire control board software to be saved and restored later, if needed. This makes it possible to use one control board as a spare part for many different sizes of drives.

DriveWindow 2 features

- Easy-to-use tool for commissioning and maintenance
- Several drives connected and monitored at the same time
- Monitor, edit or save signals and parameters, clear graphical presentation
- High speed communication between PC and drive
- Versatile back-up functions
- View data collected and stored in the drive
- Fault diagnostics; DriveWindow indicates the status of drives, and also reads fault history data from the drive

DriveWindow Light 2

Start-up and maintenance tool

DriveWindow Light 2 is an easy-to-use start-up and maintenance tool for ACS800 drives. It supports the following software: standard application, pump control, and spinning and traverse control. The DriveWindow Light 2 only supports drive frame sizes of R2-R8.

DriveWindow Light uses the drive's panel connector for communication, which makes communication setup very easy.

Light software with heavy features

DriveWindow Light offers many functions in an easy-to-use package. It can be used in an offline mode, which enables parameter setting at the office even before going to the actual site. The parameter browser enables viewing, editing and saving of parameters. The parameter comparison feature makes it possible to compare parameter values between the drive and the file. With the parameter subset you can create your own parameter sets. Controlling of the drive is naturally one of the features in DriveWindow Light.

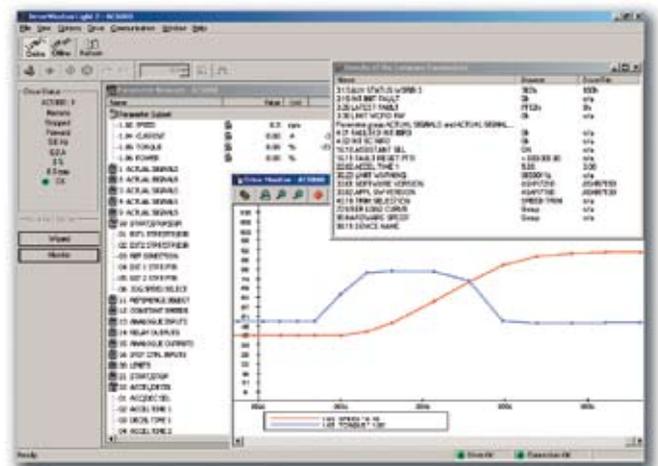

With DriveWindow Light, you can monitor up to four signals simultaneously. This can be done in both graphical and numerical format. Any signal can be set to stop the monitoring from a predefined level.

Highlights

- Viewing and setting parameters in offline mode
- Editing, saving and downloading parameters
- Comparing parameters
- Graphical and numerical signal monitoring
- Drive control

DriveWindow Light requirements

- Windows 98/NT/2000/XP
- Free serial port from a PC
- Free control panel connector
- NPCU-01 PC connection unit (serial communications)

Summary of features and options

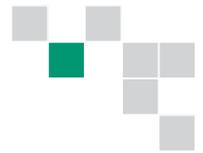

Power & voltage range	Option Code	-U4 / -04	-U4 / -04	104 (inverters)	204 (ISU)	304 and 704 (supply units)
		Frame sizes R2-R6	Frame sizes R7-R8	Frame sizes nxR81	Frame sizes R2i-4xR8i	Frame sizes D3 - 5xD4

Services and support

Global service network

ABB provides professional spare part, maintenance and repair services using its own authorized and certified service personnel as well as the personnel of the ABB channel partners all over the world.

Note: Though all services are available globally, local services may vary.

For more information on our ACS800 services and service network, please contact your local ABB representative.

Productized services

ABB's drive lifecycle management model provides customers with the maximum profit for the purchased assets by maintaining high availability, eliminating unplanned repair costs and extending drive lifetime. The lifecycle management model comprises many dedicated services for the entire lifecycle of ACS800 drives.

Start-up services

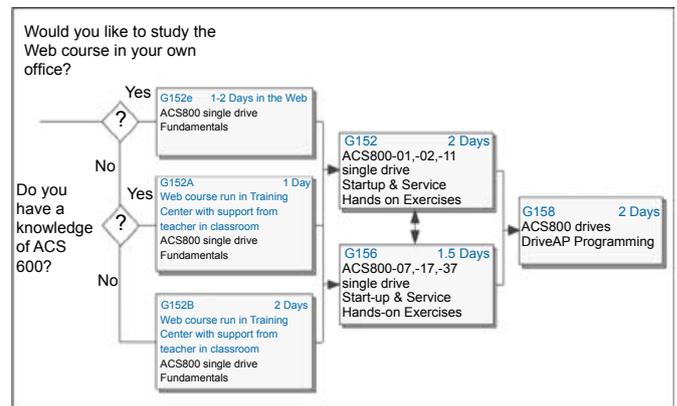

Using ABB's start-up services you can trust that your drives are correctly commissioned and tuned to their application. ABB global service network personnel are authorized professionals who are thoroughly trained for their job.

Training services

ABB offers dedicated training on ACS800 drives for your service and operating personnel for acquiring the required skills to use your ABB drives correctly and safely and to run the application in the most effective way.

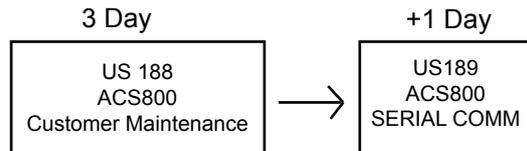

ACS800 single drive training courses

Global Training

For more information on our training services, please contact your local ABB representative or visit the ABB University website: <http://www.abb.com/abbuniversity>.

US Specific Training

USA website: <http://www.abb-drives.com/training>

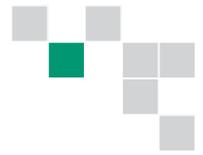

On-site spares kits

ACS800 drive on-site spares kits contain the most critical spare parts. You can choose your ACS800 drive spares kits from a separate table. If you do not have a copy, please contact your local ABB representative.

Contact and web information

For US support www.abb.us/drives

For Global support www.abb.com/motors&drives

ABB's worldwide presence is built on strong local companies working together with the local distributor and channel partner network across borders to achieve a uniform level of services for all our customers. By combining the experience and know-how gained in local and global markets, we ensure that our customers in all industries can gain the full benefit from our products.

For further details about all our variable speed drive products and services please contact your nearest ABB office or visit the ABB website: <http://www.abb-drives.com>
